

## Year 9

<u>Half Term 1</u>	<u>Half Term 2</u>	<u>Half Term 3</u>	<u>Half Term 4</u>	<u>Half Term 5</u>	<u>Half Term 6</u>
<b>Chemical reactions, exothermic/endothermic</b>	<b>Waves, light and sound</b>	<b>Evolution and inheritance, natural selection</b>	<b>Energy</b>	<b>States of matter and Atomic structure</b>	<b>Cell biology</b>
<i>Organising tables. Making predictions based on understanding. Selecting and applying scientific techniques. Health and safety, evaluating risks.</i>	<i>Organising tables. Recording data, applying calculations, measuring angles, suggesting improvements to techniques. Suggesting reasons for errors. Identifying variables. Repeatability.</i>	<i>Understanding that scientific methods and theories develop as earlier explanations are modified to take account of new evidence and ideas, together with the importance of publishing results and peer review</i>	<i>Applying calculations, analysing data. Using SI units.</i>	<i>Understanding how scientific theories develop over time. Plan and carry out scientific enquiries. Accuracy and precision. Identifying variables. Chemical nomenclature. Calculating atomic number and mass</i>	<i>Understanding scientific understanding develops over time. Applying calculations, understanding and using SI units. using standard form. Presenting and recording data. Analysing data, using graphs.</i>
		<u>February Assessment</u>			<u>End of year assessment</u>
<b>Materials</b> <ul style="list-style-type: none"> <li>the order of metals and carbon in the reactivity series</li> <li>the use of carbon in obtaining metals from metal oxides</li> </ul> <b>Chemical Reactions</b> <ul style="list-style-type: none"> <li>combustion, thermal decomposition, oxidation and displacement reactions</li> </ul> <b>Energetics</b> <ul style="list-style-type: none"> <li>exothermic and endothermic chemical reactions (qualitative).</li> <li>representing chemical reactions using formulae and using equations</li> </ul> <b>Periodic Table</b> <ul style="list-style-type: none"> <li>the chemical properties of metal and non-metal</li> </ul>	<b>Observed waves</b> <ul style="list-style-type: none"> <li>waves on water as undulations which travel through water with transverse motion; these waves can be reflected, and add or cancel – superposition.</li> </ul> <b>Sound waves</b> <ul style="list-style-type: none"> <li>frequencies of sound waves, measured in hertz (Hz); echoes, reflection and absorption of sound</li> <li>sound needs a medium to travel, the speed of sound in air, in water, in solids</li> <li>sound produced by vibrations of objects, in loud speakers, detected by their effects on microphone diaphragm and the ear drum; sound waves are longitudinal</li> <li>auditory range of humans and animals.</li> </ul>	<b>Genetics and evolution</b> <b>Inheritance, chromosomes, DNA and genes</b> <ul style="list-style-type: none"> <li>heredity as the process by which genetic information is transmitted from one generation to the next</li> <li>a simple model of chromosomes, genes and DNA in heredity, including the part played by Watson, Crick, Wilkins and Franklin in the development of the DNA model</li> <li>differences between species</li> <li>the variation between individuals within a species being continuous or discontinuous, to include measurement and graphical representation of variation</li> <li>the variation between species and between individuals of the same species means some organisms compete more</li> </ul>	<b>Changes in systems</b> <ul style="list-style-type: none"> <li>energy as a quantity that can be quantified and calculated; the total energy has the same value before and after a change</li> <li>comparing the starting with the final conditions of a system and describing increases and decreases in the amounts of energy associated with movements, temperatures, changes in positions in a field, in elastic distortions and in chemical compositions</li> <li>using physical processes and mechanisms, rather than energy, to explain the intermediate steps that bring about such changes.</li> </ul> <b>Calculation of fuel uses and costs in the domestic context</b> <ul style="list-style-type: none"> <li>fuels and energy resources.</li> </ul> <b>Earth and atmosphere</b>	<b>The particulate nature of matter</b> <ul style="list-style-type: none"> <li>the properties of the different states of matter (solid, liquid and gas) in terms of the particle model, including gas pressure</li> <li>changes of state in terms of the particle model.</li> </ul> <b>The periodic Table</b> <ul style="list-style-type: none"> <li>the varying physical and chemical properties of different elements</li> </ul> <b>Atoms, elements and compounds</b> <ul style="list-style-type: none"> <li>a simple (Dalton) atomic model</li> <li>differences between atoms, elements and compounds</li> <li>chemical symbols and formulae for elements and compounds</li> <li>conservation of mass changes of state.</li> </ul>	<b>Cells and organisation</b> <ul style="list-style-type: none"> <li>cells as the fundamental unit of living organisms, including how to observe, interpret and record cell structure using a light microscope</li> <li>the functions of the cell wall, cell membrane, cytoplasm, nucleus, vacuole, mitochondria and chloroplasts</li> <li>the similarities and differences between plant and animal cells</li> <li>the role of diffusion in the movement of materials in and between cells</li> <li>the structural adaptations of some unicellular organisms</li> <li>the hierarchical organisation of multicellular organisms: from cells to tissues to organs to systems to organisms.</li> </ul> <b>Matter</b> <ul style="list-style-type: none"> <li>diffusion in liquids and gases driven by differences in concentration</li> </ul>

<p>oxides with respect to acidity.</p>	<p><b>Energy and waves</b></p> <ul style="list-style-type: none"> <li>pressure waves transferring energy; use for cleaning and physiotherapy by ultra-sound; waves transferring information for conversion to electrical signals by microphone.</li> </ul> <p><b>Light waves</b></p> <ul style="list-style-type: none"> <li>the similarities and differences between light waves and waves in matter</li> <li>light waves travelling through a vacuum; speed of light</li> <li>the transmission of light through materials: absorption, diffuse scattering and specular reflection at a surface</li> <li>use of ray model to explain imaging in mirrors, the pinhole camera, the refraction of light and action of convex lens in focusing (qualitative); the human eye</li> <li>light transferring energy from source to absorber leading to chemical and electrical effects; photo-sensitive material in the retina and in cameras</li> <li>colours and the different frequencies of light, white light and prisms (qualitative only); differential colour effects in absorption and diffuse reflection.</li> </ul>	<p>successfully, which can drive natural selection</p> <ul style="list-style-type: none"> <li>changes in the environment may leave individuals within a species, and some entire species, less well adapted to compete successfully and reproduce, which in turn may lead to extinction</li> <li>the importance of maintaining biodiversity and the use of gene banks to preserve hereditary material.</li> </ul>	<ul style="list-style-type: none"> <li>the production of carbon dioxide by human activity and the impact on climate.</li> </ul>	<p><b>Pure and impure substances</b></p> <ul style="list-style-type: none"> <li>the concept of a pure substance</li> <li>mixtures, including dissolving</li> <li>diffusion in terms of the particle model</li> <li>simple techniques for separating mixtures: filtration, evaporation, distillation and chromatography</li> <li>the identification of pure substances.</li> </ul>
